

# Cássio Possamai Spessatto

Front End Developer

"After four years of experience with technical support in TOTVS systems, and seven years of experience in commercial area. In 2019 I got my first job in the development area as a front-end developer. Since I started working in this area, I have been studying and acquiring knowledge and experience in the main front-end technologies. Having the opportunity to work on various projects has made me a professional capable of developing efficient and practical solutions, always thinking about the good development practices that the market demands. I'm currently studying and working with Vue.JS and I'm also always looking to improve my front end skills and develop back end knowledge."
