"After building a solid career outside the development area, working in the administrative area and with technical support. I graduated in Business Management and Software Engineering with a Postgraduate / MBA in Project Management. Today I have been working with software development since 2019.

Since then, I work as a front-end developer. Having the opportunity to work on several projects with companies from different segments made me a professional capable of developing efficient and practical solutions, focusing on good development practices that the market demands. Always studying and acquiring knowledge and experience in the main front-end technologies. Currently I study and work with Vue and I constantly seek to improve my already developed front-end skills and absorb new back-end knowledge. **"**

WORK EXPERIENCE:

We are meta – September/2022 – Currently
